## Dryer Vent Cleaning Service

To schedule your dryer vent cleaning please call our office

Monday – Friday – 8am – 5pm

CALL 757-234-0185

### WHY IS DRYER VENT CLEANING IMPORTANT?

- **AIR DUCT CLEANING SERVICES REMOVES THE LINT BUILDUP FROM DRYER DUCTS.**
- **A CLEANER DRYER DUCT WILL ALLOW YOUR DRYER TO OPERATE PROPERLY.**

### CLEAN DRYER VENTS HELP PREVENT:

**EXCESSIVE DRYING TIME:** When your vents are clean, your dryer operates more efficiently, and the clothes dry faster and put more money in your pocket because you save wear and tear on your dryer.

**BREAKDOWNS:** The cleaner the vent, the less strain there is on your dryer, so the motors and electrical circuits last longer. And you don't have to spend as much on repairs or replacements.

**HIGH UTILITY BILLS:** When your dryer is running at peak efficiency, it costs you less to operate.

**FIRE:** Overloaded vents and overworked dryers can be a dangerous combination.

Why should you have your dryer vents cleaned?

The Consumer Product Safety Commission's 1995 Residential Fire Loss Estimates (latest information available) – indicate that 15,800 residential fires originated from dryer vents - which is up from the 13,700 that took place in 1991. The number of residential fires attributed to dryer vents in on the increase.

### Reasons for inspection and cleaning:

1. **Reduces chance of dryer vent fire.** When the dryer is used, over time lint will collect and adhere to the inside of the dryer vent walls. The larger the buildup, the larger the risk of having a dryer vent fire.
2. **Reduces "wasted electricity" and "appliance stress".** Use of a dryer with a dirty vent can cause the dryer to run longer to dry the same amount of clothes because the hot air being expelled cannot freely exit the vent. Longer drying time takes more electricity and puts added stress on the appliance.
3. **Metal connector requirements.** All connection pieces to the dryer vents should be inspected to make sure they are properly attached and up to the newer building code requirements. Regular maintenance will keep the dryer vent clean and the dryer working properly.

**What HCI will do:** Regardless of what type of dryer you have: stackable, side-by-side, gas or electric; and how your dryer is vented: through the wall, up through the roof, across the inside of the ceiling, etc., your dryer vent will be professionally cleared of debris that could result in a fire, and improve the safety of your home. We will run the vent cleaning equipment as needed, while using air. Once the cleaning equipment has traveled the length of the vent enough times to thoroughly clean the vent, we will clean out the connection piece, re-attach your dryer and re-check the vent while your dryer is operating. Keep yourself, your family and your property safe by having your dryer vent cleaned properly, by qualified and experienced technicians that know how to do the job right the first time. **Just call HCI at 757-234-0185**
